Copying a save to a new slot

Bugs & Exploits

Dunno if this is the right flair for this, but nothing really seemed to fit. Bugs & Exploits seemed closest.

I've been banging my head against this for a bit because one of my nieces wanted to do stuff on my file but we have completely different ideas about slime ranching so she requested her own copy of my save to play on. It baffles me this doesn't exist as a function in the game, but oh well. I figured I'd make a post since when I did searches I just found the same question I had.

It turns out SR2 doesn't do save slots by individual files. Instead, each file tells the game which slot it is. This means copying to a new slot means modifying the file with a hex editor, but the modifications are rather simple. There's three changes to make, though I believe only two of them are actually necessary. I think.

First thing is to locate your save file. It should be in your AppData folder:
C:\Users\YOURUSERNAME\AppData\Local\MonomiPark\SlimeRancher2\

An easy way to get there is to type %appdata% into the file address bar. It will take you to AppData\Roaming and you can go up one folder to find LocalLow. AFAIK there's no shortcut for LocalLow

In there I believe the folder depends on if you got it on Steam or Epic. It should have a corresponding folder ("Steam" or "Epic"). Go into that folder, and then another one with a bunch of numbers (it should be the only folder). Now you're at the save files.

You'll find a bunch of oddly named files with the .sav extension. These are your save files, and most as far as I can tell are like back ups. I don't know if SR2 actually uses them but they're there. The names are [Save Creation DateTime]_[slot#]_X. The file name is actually not important but it will help you find the one you want. Copy the most recent file for your slot (so if you wanted slot 3 it would be something like 20260122202415_3_5.sav). You can name the file whatever you want. Now you have to open the copy in a hex editor. I used HxD.

A note on Steam Cloud; I did all this while the game was open mainly to test if it showed up in the new slot, but I believe this will also make Steam Cloud happily upload the copy once you close the game as if SR2 itself had actually created it.

First and foremost, before diving into the editor, you only want to replace the values I show highlighted. Don't "insert" new data, so to speak. It could throw the game off loading the files. HxD at the very least, will warn you if you are about the change the file size.

First is the actual slot the game uses. You need to go to location 5D6F (in hex) and change the value there to the 0 indexed slot number you want. That means slot 1 is value 00 in the file. Slot 2 is 01 and so fourth.

The value to change for the save slot

The file here will show in slot 3. You also want to be sure to edit it on the hex side and not the ASCII side (where the dark blue highlight is)

The next change I believe is just the text the game shows for that slot: "File 1", "File 2", "File 3", etc. As far as I can tell the game doesn't care if multiple files have the same value for this so it probably doesn't matter in the end. It doesn't hurt to change it though.

File Text Value

At location 5D6E, this is the number that shows in the text for "File X". You want to edit this on the ASCII side. I put in the slot number the file was going in.

00005D30	73	69	74	65	12	63	6F	6E	73	65	72	76	61	74	6F	72	site.conservator

00005D70	00	00	00	00	03	00	00	00	00	30	1D	31	2E	31	2E	30	0.1.1.0
00005D80	20	5B	32	30	32	35	31	31	30	31	30	33	30	30	30	30	[20251101030000

The file name the game will save with

The last bit, starting at 5D5D, is the file name the game uses when saving the game. Again, use the ASCII side of the editor for this. Change this to, really, anything you want that doesn't conflict with the other save files, which should be pretty easy. I didn't test as far as accidental overwriting but I'm 100% sure it will happen if you let it. The game seems to keep a short history of saves per slot, up to five files, and each time it saves it will use the value here for the file name. So if you change the save slot value without changing the file name here, it will probably eventually replace the original save, even if it shows in a different slot. If you want, after saving you can rename the file to what you put in this spot. The game will pick up it regardless and use the value when it saves.
